Bài 1

V = { the, cat, eats, fish, likes, dog, meat }
3 2 2 2 1 1 1

N token = 12

$P(\text{the}) = \frac{3}{12} = \frac{1}{4} = 0,25$

$P(\text{cat}) = \frac{2}{12}$

$P(\text{fish}) = \frac{2}{12}$

$P(\text{dog}) = \frac{1}{12}$

$\sum P(w) = \frac{3+2+2+2+1+1+1}{12} = 1$

B.2

$P(\text{cat}|\text{the}) = \frac{C(\text{the cat})}{C(\text{the})} = \frac{2}{3}$

$P(\text{Dog}|\text{the}) = \frac{1}{3}$

$P(\text{eat}|\text{cat}) = \frac{1}{2}$

$P(\text{like}|\text{cat}) = \frac{1}{2}$

No:.....
Date:.....

- Vì rõ lần xuất hiện của mỗi con thì bằng xác lần xuất hiện thì

R_3

$$P(\text{fish} \mid \text{cat}) = \frac{2}{3}$$

$$P(\text{the cat eats fish}) = \frac{1}{4} \cdot \frac{2}{3} \cdot \frac{1}{2} \cdot \frac{2}{3} = \frac{4}{72}$$

- Xác suất rõ giảm

R_4

$$P(\text{eat} \mid \text{dog}) = \frac{1}{1} \cdot 1$$

S_1 S_2

$$P(\text{the}) \cdot P(\text{cat} \mid \text{the}) \cdot P(\text{eat} \mid \text{the}) \cdot P(\text{fish} \mid \text{eat})$$

S_2

$$\| \; P(\text{dog} \mid \text{the}) \cdot P(\text{eat} \mid \text{dog}) \; \|$$

$$\frac{2}{3} \cdot \frac{1}{2} = \frac{2}{6}$$

$$\frac{1}{3} \cdot 1$$

$$\Rightarrow P(S_1) = P(S_2)$$
